

CALEX[®] Cap

Fast

Easy

**Stable
fecal
extraction**

- Maximum workflow optimisation
- Setting the standard for easy fecal extraction
- Stable at room temperature

CALEX® Cap Unique Features

The prefilled tubes are ready to use in three simple steps:

- 1** Dip the dosing tip into the fecal sample and fill the grooves completely with the matrix.
- 2** Place the pin back into the tube, close tightly and extract by soaking and vortexing.
- 3** For turbidimetric assays only: Centrifuge the extract within the CALEX® tube for 10 min.

The resulting extract (1:500) is ready to use in the turbidimetric assay. The CALEX® extraction is highly correlating to the manual weighting method.

Pre-analytical side
Total laboratory automation and smooth rack filling with new sampling pinhead

Fully quantitative results

Analytical side
Cap ergonomics facilitates automated and manual decapping

- SIMPLICITY** Cap ergonomics supports the simple and safe use of CALEX® Cap, significantly reducing hands-on time
- AUTOMATION** Designed for total laboratory automation (TLA) systems
- STABILITY** Extensive validation proves stability at RT for 7 days. The CALEX® Cap is suitable for air transportation according to IATA 650 (UN3373)
- EFFICIENCY** Optimal extract dilution of 1:500
